Apne store mein login

Yeh guide Owner ke banaye hue employee aur branch accounts ke liye hai.

Employee login

1. Owner se apna **User ID** aur password lein. Misaal User ID: **ali_cashier01**. Yeh sirf misaal hai, ready account nahi.
2. Karobar kholein, internet connect karein aur **Employee? Login with User ID** chunein.
3. User ID aur password daal kar **Login** dabayein. Password ki capital/small letters aur extra spaces check karein.
4. Login ke baad business name aur available store data check karein. Ghalat store ho to transactions enter na karein; Owner ko batayein.

> Employee banne ke liye Continue with Google ya Create an account use na karein. Owner ke store mein aane ke liye us ka diya hua employee login istemal karein; naya Owner account alag store bana sakta hai.

Branch login

1. Owner se apni branch ka **6-digit branch code** aur password lein.
2. Login screen par **Branch? Add your branch code** chunein.
3. Code/password enter karein aur login ke baad store/branch details check karein.

Branch account aur employee User ID alag login tareeqe hain. Branch ke liye employee screen par code na daalein. Branch workflow ko Owner se pehle verify karwayein.

Dobara app kholne par

Login maange to wahi employee ID ya branch code use karein. Apna password bhool jayein to Owner se rabta karein; naya Google account bana kar purana business data nahi milega.

Roz ka kaam aur permissions

Shift shuru karte waqt

- Business name aur apni login identity check karein.
- Internet/sync status dekhein.
- Sirf apne account par kaam karein; kisi aur ki identity use na karein.
- Chhoti window par menu button se sidebar kholein aur apna section select karein.

Menu aur kaam

Owner ki di hui access ke mutabiq dashboard, items, parties aur sale invoices jaise sections available ho sakte hain. Invoice save karne se pehle customer, item, quantity, rate aur total check karein. Kisi action par access error aaye to usay bypass karne ki koshish na karein.

> **v3.0.0 permission limitation:** Naye employee roles mein mismatch ki wajah se selected Cashier, Manager ya Admin role ke bawajood create/edit controls unavailable ho sakte hain. Yeh aap ki login ghalti zaroori nahi. Owner ko exact error batayein; permissions fix/test hone tak required staff workflows ready assume na karein.

Manager PIN

Kisi action ke liye Manager PIN maanga jaye to authorized manager se rabta karein. PIN 4 digits hota hai; employee password se alag hai. Doosre employee ka PIN ya Owner password mang kar permissions cross na karein.

Branch ke employees

Branch session mein Add User se bana hua local record independent Firebase employee account nahi hota. Alag laptop/device par employee login chahiye to asal Owner se cloud-linked user create karwayein.

Shift khatam karte waqt

Pending edits save karein, cloud status check karein, aur shared laptop par Logout karein. Save error ho to Owner ko inform karein; sirf window band karna cloud save ki tasdeeq nahi.

Maslay aur data ki hifazat

Masla	Agla qadam
Login nahi hota	Sahi Employee/Branch screen, ID/code, password aur internet check karein. Phir Owner se account verify karwayein.
Data khaali ya ghalat hai	Business/account check karein. Naye records ya restore se pehle Owner ko batayein.
Button missing / No access	Owner ko role aur exact error batayein. v3.0.0 role limitation bhi mumkin hai.
Waiting for cloud	Data local pending hai. Internet rakhein aur Cloud saved ka intezar karein.
Cloud save failed	Owner ko error dein. App reset, cache clear ya uninstall na karein.
Logo/profile badalna hai	Owner se company profile update karwayein.

Yeh kaam na karein

- Owner ki Gmail ya password doosron ke saath share na karein.
- Password, PIN, customer details ya backup public screenshot mein na dikhayein.
- Data missing ho to ghalat backup restore ya app data clear na karein.
- Owner ki ijazat aur current backup ke baghair restore na karein: current data replace ho sakta hai.

Owner ko report kaise dein?

Apna User ID/branch code, app version **3.0.0**, maslay ka waqt, screen ka naam aur exact error batayein. Screenshot bhejna ho to passwords aur private customer information chhupa dein.

> Is guide ke steps current code ke mutabiq hain. Har employee/branch ki real-device login aur permission testing Owner ki onboarding checklist ka hissa honi chahiye.
